Job Application for DevOps

To whom it may concern,

About Me

I'm a software developer with 4 years of professional experience with a potent interest for event-driven distributed systems. Over the last two years I've personally designed, built and managed multiple apache kafka clusters that help service and adhere to enterprise-grade requirements, one of which includes guaranteeing that all PII/PCI classified data is field level encrypted prior to being sent to cloud services.

Why Lenses?

Most of my experience with kafka has been with Confluent Kafka. Although Confluent Kafka has served us well over the years, i can't help but notice that they still to this day lack a severe amount of features that should be considered mandatory when running Kafka on an enterprise Level. Taking look a look at lense i see that the Lenses team has acknowledged this gap and is working at a rapid pace to bridge the gaps apparent within Kafka. I'd like to be apart of that journey.

Why Me?

Proficiency in operating multi-region distributed platforms like apache kafka on aws. Extensive software development life-cycle experience exercised from start to finish along with prominent communication skills and constructive attitude. Strong love, sense of passion, and duty for building safe and secure applications.

Best Wishes,

Edward Vaisman
