## Job Application for Software Engineer – Cloud Secure

To whom it may concern,

### About Me

I'm a software developer with 4 years of professional experience with a potent interest for event-driven distributed systems. Over the last two years I've personally designed, built and managed multiple apache kafka clusters that help service and adhere to enterprise-grade requirements, one of which includes guaranteeing that all PII/PCI classified data is field level encrypted prior to being sent to cloud services.

### Why HashiCorp?

At the beginning of our cloud journey, I worked closely and evaluated the vault product and whether or not it could be used within BMO to help manage and protect sensitive data in relation to our Kafka Cluster. For reasons outside my control, we ended up not pursuing HashiCorp but the time that was spent on learning Vault has piqued my interest. If I was to be considered for this role, I look forward to bring my expertise in operating distributed systems at scale to Vault as well as other innovative ways enterprises can use Vault as their primary secrets tool.

### Why Me?

Proficiency in operating multi-region distributed platforms like apache kafka on aws. Extensive software development life-cycle experience exercised from start to finish along with prominent communication skills and constructive attitude. Strong love, sense of passion, and duty for building safe and secure applications.

Best Wishes,

**Edward Vaisman**
